

As a satellite radio subscriber, I do not support NAB's petition 04-160 to the FCC to limit what content satellite radio can offer. We make a choice to subscribe to Satellite Radio and pay a monthly fee to listen to what we want to listen to. It seems that you are trying to penalize one (satellite radio) because the others won't offer such programming (AM & FM radio). The AM and FM stations have a choice as to their programming content, so if they want to play in this sandbox, let them, but don't enable them to bully the one that does it the best.

Instant Traffic and Weather is a critical to those of us who spend a lot of time on the road and there are no other services in the area that offer continuous service. A majority of the AM and FM stations offer traffic and weather intermingled throughout their broadcasts, on their time, not mine. I also find that their accuracy is lacking and not instantaneous, which is not sufficient for my needs.

Why would you try to stifle this service when it meets the needs of those who choose to subscribe.

I do not want satellite radio to be censored and have their programming dictated by owners of AM and FM stations that have not kept up with the needs of the populace.
